

Data Analytics Internship — Level 1

Task 3: Price Range Distribution

Objective

This report examines how restaurants in the dataset are distributed across four price range categories (1 = lowest cost, 4 = most expensive). It visualizes this distribution with a bar chart and calculates the percentage of restaurants falling into each category, directly addressing the Level 1, Task 3 brief.

Dataset Overview

Metric	Value
Total restaurant records	9,551
Price range categories	4 (Range 1 – Range 4)
Missing price range values	0

Price Range Distribution

Price Range	Description	Restaurants	% of Total
1	Low Cost (Budget)	4,444	46.53%
2	Moderate	3,113	32.59%
3	Expensive	1,408	14.74%
4	Very Expensive (Fine Dining)	586	6.14%

Figure 1: Bar chart showing the number and percentage of restaurants in each price range.

Percentage Share

The donut chart below highlights the relative share of each price category as a proportion of the full restaurant base.

Figure 2: Percentage share of restaurants across price range categories.

Key Findings

- Nearly half of all restaurants (46.53%) fall into **Price Range 1 (Low Cost / Budget)**, " making budget-friendly dining the dominant category in this market.
- **Price Range 2 (Moderate)** restaurants make up the second-largest group at 32.59%, " together with Range 1 accounting for roughly 79.1% of all restaurants.
- Higher-end dining is comparatively rare: **Price Range 3 (Expensive)** accounts for only 14.74%, " and **Price Range 4 (Very Expensive / Fine Dining)** makes up just 6.14% of restaurants.
- The distribution shows a clear downward trend as price increases — a pattern consistent with " typical

food-service markets, where affordable options vastly outnumber premium establishments.

Conclusion

The restaurant market analyzed here is heavily weighted toward affordability, with budget and moderate price ranges together representing close to four out of every five restaurants. This suggests strong demand for cost-effective dining options, while fine dining remains a niche segment. These insights can help platforms and restaurateurs align pricing strategy, marketing, and inventory decisions with actual market composition.
