

Data Analytics Internship — Level 1

Task 1: Top Cuisines Analysis

Objective

This report analyzes a global restaurant dataset to identify the most common cuisines served and to quantify how prevalent each of the top cuisines is across the restaurant base. The analysis directly addresses the Level 1, Task 1 brief: determine the top three most common cuisines and calculate the percentage of restaurants serving each of them.

Dataset Overview

Metric	Value
Total restaurant records	9,542
Distinct cuisine types identified	145
Note	Restaurants may list multiple cuisines (e.g. "North Indian, Chinese"); each cuisine tag was counted as a distinct cuisine type.

Top 3 Most Common Cuisines

Rank	Cuisine	Restaurants	% of All Restaurants
1	North Indian	3,960	41.5%
2	Chinese	2,735	28.66%
3	Fast Food	1,986	20.81%

Figure 1: Restaurant count and percentage share for the top 3 cuisines.

Key Findings

- **North Indian** is the most common cuisine, offered by 3,960 restaurants — representing **41.5%** of the entire restaurant base.
- **Chinese** ranks second with 2,735 restaurants (28.66%), reflecting its strong global popularity alongside local cuisines.
- **Fast Food** completes the top three with 1,986 restaurants (20.81%), underscoring the demand for quick and casual dining options.
- Combined, these three cuisines are collectively served by the majority of restaurants in the dataset, though many establishments serve more than one cuisine simultaneously (e.g. a restaurant tagged "North Indian, Chinese" is counted in both categories).

Broader Cuisine Landscape

Beyond the top 3, the dataset contains 145 distinct cuisine types, highlighting a highly diverse culinary market. The chart below extends the view to the top 10 cuisines, showing a steep drop-off after the leading categories — a classic long-tail distribution typical of food-service markets.

Figure 2: Top 10 cuisines ranked by number of restaurants.

Share of Market

The donut chart below visualizes what portion of the total restaurant base each top cuisine occupies, relative to all remaining cuisines combined.

Figure 3: Proportional share of restaurants across top cuisines vs. all others.

Conclusion

North Indian, Chinese, and Fast Food emerge as the dominant cuisines in this restaurant dataset, together accounting for a substantial share of listings. This suggests that restaurateurs and food delivery platforms operating in this market should prioritize strong coverage of these cuisines, while the long tail of 145 distinct cuisines offers opportunities for differentiation and niche positioning in a competitive market.
